PROFESSIONAL SUMMARY

Flutter-focused Software Engineer with over 2 years of experience developing and maintaining production mobile applications for wealth management and trading, serving financial advisers and high-net-worth clients.

WORK EXPERIENCE

iFAST Global Hub AI Sdn. Bhd. Jul 2024 – Present

IT Specialist (Mobile Application Development)

- Serve as the primary mobile engineer for a production B2B fintech application, overseeing feature development, effort estimation, production support and releases. Deliver shared features across a second Flutter application with a separate codebase.
- Independently built Sentry-based API monitoring across 2 production Flutter applications, detecting issues across 192 distinct application-endpoint combinations over 90 days. Integrated automated alerts and drove resolution of 14 Jira-tracked issues involving API spam and system errors.
- Developed a Sentry transaction-tracing proof of concept across 6 financial product types, from cash to managed portfolios, linking API calls within each transaction to track completion and measure end-to-end latency.
- Collaborated with backend engineers to resolve slow loading caused by oversized third-party API responses. Updated the Flutter module to retrieve paginated data through smaller API requests in parallel, eliminating the loading delays.
- Designed a reusable ActionLock mechanism to prevent duplicate stock-trading submissions during processing and after success, while allowing retries following failed requests.
- Launched a new self-service investment account type with fully online onboarding, replacing manual application steps and enabling clients to independently invest in funds, bonds, stocks and ETFs.
- Designed and launched a configurable dispute form module for an e-wallet application, supporting 31 questions across 6 dispute categories with reusable input components and centralised validation rules.
- Integrated Hong Kong's iAM Smart identity verification and implemented iOS and Android app-switcher masking to protect sensitive financial information, closing a penetration-test finding.
- Mentored an intern through delivery of the US ETF Regular Savings Plan, providing technical guidance, delegating tasks, reviewing code and coordinating testing and production release.

iFAST Service Centre Sdn. Bhd. Feb 2023 – Aug 2023

IT Partnership Intern

- Fixed application bugs, developed frontend features and improved user interfaces.
- Worked with cross-functional teams on localisation changes and features based on user requirements.

TECHNICAL SKILLS

Mobile: Flutter, Dart, Provider, MVVM, REST APIs, Native Platform Channels
Tooling: Git, Sentry, Grafana, Jenkins, Fastlane, Jira, Shorebird
Backend & Web: Java, Spring Boot, JavaScript, Python, SQL, Vue.js

PROJECTS

Stock View | Vue.js, Python, MySQL
Built a Bursa Malaysia stock-screening web app with configurable technical indicators and database-backed financial data.

EDUCATION & AWARDS

Bachelor of Computer Science (Software Engineering), Universiti Malaysia Sarawak | 2020–2024

CGPA 3.90/4.00 | Dean's List (7 semesters) | NASA Space Apps Sarawak 2023 Champion (Senior Category) | CodeNection Hackathon 2022 3rd Runner-Up
