PROFILE

Mobile Software Engineer focused on Flutter, with experience building reliable, scalable apps across the full development lifecycle. Strong focus on performance, production monitoring, and API integration, with growing experience in code review and mentoring.

WORK EXPERIENCE

IT Specialist; iFAST Global Hub AI Sdn. Bhd. *July 2024 - Present*

- Mentor an intern by assigning tasks and giving technical guidance on Flutter development and review their code to help maintain quality and best practices.
- As app maintainer, handle production support for mobile app issues, tracing backend logs and code when an issue stems from an API error and going beyond app-side ownership to speed up root-cause identification.
- Independently designed and built a frontend API monitoring and alerting system using Sentry, capturing all API traffic at the network interceptor layer to detect five types of issues: slow responses, timeouts, API spam, backend errors, and CDN-layer blocks.
- Used the system to catch a bulky API call that was overloading the database and fixed it by revamping the app to fire multiple lightweight API calls instead of one bulky call, deployed with zero user complaints.
- Also used the system to catch several spam and backend-failure incidents after deployment and improved its accuracy by switching slow-response tracking from total request time to backend processing time.
- Built a reusable tool to lock user actions on the frontend, preventing duplicate transaction submissions and race conditions, and improving reliability across key transaction flows.
- Used platform channels to add native iOS/Android features, including launching Hong Kong's iAM Smart for identity verification during account opening and online activation (backend handled the actual verification logic), and an app-masking overlay that covers the screen when the app is backgrounded, fixing a penetration test finding.
- Triggered app release builds through an existing Jenkins-configured Fastlane pipeline, and handled submissions through App Store Connect and Google Play Console, supporting SIT, UAT, and regression testing to keep releases stable during high-traffic periods.

Intern, IT Partnership; iFast Service Centre Sdn. Bhd. *February 2023 - August 2023*

- Fixed bugs, built new features, and improved the UI as part of frontend development.
- Worked with cross-functional teams to deliver solutions that met user needs.

PROJECTS

Stock View - Final Year Project | *VueJS, Python, MySQL*

- Developed a web application using VueJS, Python, and MySQL for screening Bursa Malaysia stocks using customizable technical indicators, enabling users to filter stocks efficiently based on defined criteria.

SKILLS

Languages & Frameworks: Dart, Flutter

State Management: Provider

Core Strengths: Performance Optimization, System Reliability, Mobile Application Architecture, API Integration, Cross-Functional Debugging, Security Awareness (Pentest Remediation)

Tools & Technologies: Git, Sentry, Jenkins, Fastlane, REST APIs, Lightstreamer (real-time data), Platform Channels, App Store Connect, Google Play Console, Claude Code

ACHIEVEMENTS

- NASA Space Apps Sarawak 2023 - Champion (Senior Category)
- CodeNection Hackathon 2022 - 3rd Runner Up

EDUCATION

Bachelor of Computer Science (Software Engineering)
University Malaysia Sarawak | 2020 - 2024
CGPA: 3.90 / 4.00 (Dean's List for 7 of 8 academic semesters; industrial training semester not eligible)
